

CENTRAL METALS

Central Metals Universal Flume

Attractive, watertight and **IT WORKS**

With 40% more open area, the Central Metals Universal Flume provides superior performance. Our innovative design using two additional rows of venting holes and a larger, more effective cap produces a functional, attractive flume. With enhanced performance, our flumes can be used anywhere in the home.

Zincalume®

Colorbond®

Our Flumes Deliver:

- **improved airflow** – with a larger cap and 40% more open area
- **universal design** – unlike other flumes, ours are designed to handle maximum ventilation from high velocity fans, like those used with rangehoods, as well as standard air extraction over bathrooms and toilets
- **better waterproofing** – our caps have a 70mm overhang preventing rain splashing back into the flume. We also seal the seam on the pipe and the top and bottom of the base plate
- **architectural, high performance design** - all caps are spun using a single piece of aluminium which is then powder coated ensuring no fading, chipping or uneven colours
- **all these benefits** – at no extra cost
- **optional ember shield** – to ensure compliance in fire risk areas.

Using next generation ZINCALUME® steel and COLORBOND® steel, our flumes are high quality and long lasting. Our highly motivated team includes tradesmen with over 15 years' experience in the manufacture of flumes, guaranteeing the highest quality possible. And our uniquely designed stillages ensure our products are delivered 100% damage free.

Ordering is easy using our free iPad app, and our 24 hour turnaround guarantees next day delivery. Download the app today from our website (www.centralmetals.com.au) or the Apple app store.
